About the Course

Learning Objectives

At the end of the course, learners will be able to:

- Discuss the important, new, scientific breakthroughs in the prevention, diagnosis, and treatment of addiction.
- Critically evaluate new science and describe how it changes the current understanding of addiction and co-occurring medical or psychiatric disorders.
- Develop practical applications for integrating new and emerging science into practice.
- Identify gaps in the field of addiction medicine that future research can address.
- Create a network of colleagues and resources to support the learner's practice or form future research collaborations.
